

qPCR Lentivirus Titer Kit

The only kit on the market with complete elimination of NTC

No non-specific (NTC) amplification

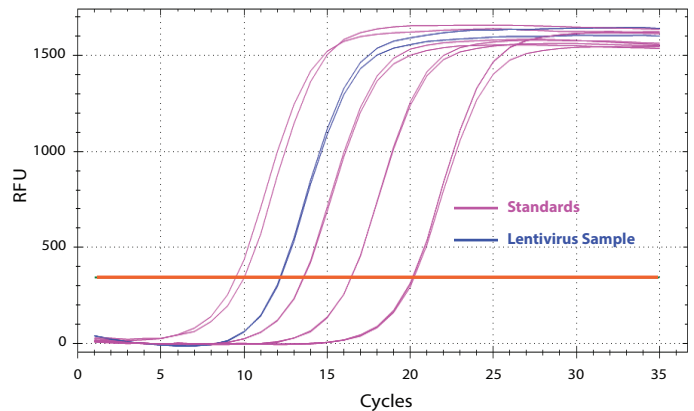

No RNA extraction, isolation or purification needed

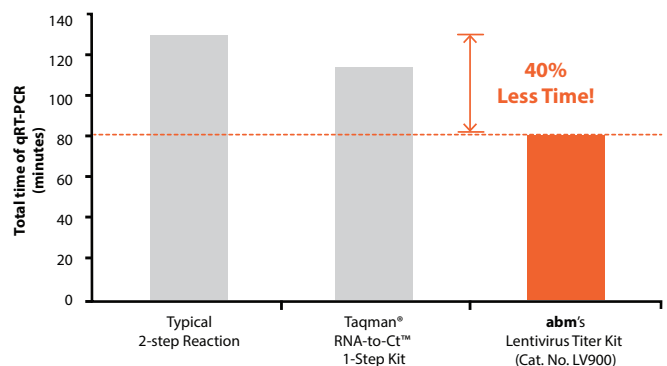

Can be used directly on neat viral particles

Ordering Information

Cat. No.	LV900
Kit Size	100 Reactions
Price	\$175 USD

abm's qPCR Lentivirus Titer Kit enables easy visualization of viral titers. A lentivirus sample (blue) was processed following the protocol for the qPCR Lentivirus Titer Kit and amplified in a qPCR reaction along with standards included in the kit (purple).

abm's qPCR Lentivirus Titer Kit is the fastest qPCR titrating kit on the market. Total qRT-PCR reaction times of abm's qPCR Lentivirus Titer Kit, the Taqman[®] RNA-to-Ct[™] 1-Step Kit, and the time required for a typical 2-step reaction were compared.
